**Description of Samples With Their Assays Made**

**January 24, 1948**

Samples were taken on the Drake claim, owned by Arizmont Mining & Chemical Corporation — silver values are not given as all were under $1.00 except No. 6 Sample which went 1.00 — six samples.

A very fine milling-ore condition with No. 6 sample a shipping-ore proposition after a little development work requiring no machinery of any kind for the present.
Chicago, February 13, 1946.

John H. Marks, M. M.
1028 - 17th Street
Denver 2, Colorado

Dear Mr. Marks:

I received your Feb. 6 letter and expect to see you the first part of March en route Arizona and will give you all data.

I enclose some data on the Co. and Splington's data as to the sample assays. I think they all stack up pretty good. I will want some more samples and assays on that No. 6 sample. The whole layout there looks like a fine milling setup does it not?

In your next be sure to let me know about that Montana location made after July 1, 1945. I feel that I am right but want to say "I know".

That bird Merritt was no good and he never will get anything from the Arizmont Co.

I shall know any day now whether we can get water from the Colo. River as I do not know what to make of that Kitsch, he certainly does put the cart before the horse, simply ridiculous.

By the way, the information I give you about Arizona is for you alone for the present.

I appreciate the long letter you wrote and the information therein contained.

All for now with best wishes,

Sincerely yours,

[Signature]

Dear Mr. Marks:

Have just received your August 6 letter, mighty glad to hear from you and get the information therein. I shall write for that Arizona booklet giving the latest claim-locations data. Also am glad of Maden information. I did not know that he had returned to Montana, have written two letters to him at Los A. and no answer. I am afraid he is in pretty bad shape. I shall write to him at Melrose.

My son has been and still is down in Arizona on the property, getting all the information and experience he can so that he will understand some mining. Couple weeks ago had worst cloudburst in years, even took out parts of Highway 60 between Quartzsite and Blythe; certainly washed out all the roads leading to Scott property and through the Indian Reservation. They had to fix road for three days with help in order to get out with their auto, he has Paulson with him. Are gradually getting the property into shape, making the payments on options etc. The showing on two of the 8 claims the Corp. owns is very good but the layout will require a big mill etc. A ton and 1/2 of the ore is being ground to a 200 and other mesh in Los A. for Ritsch and his concentrator so some day they may have a test on it.

The latter part of Sept. when the desert is down to zero I'll be on my way to Arizona and certainly shall drop off and see you and I'll keep in touch with you in the meantime. I am glad that you are well and appreciate your writing. I havn't looked up those U.S. Court decisions cited in Morrisons book on assessment work but they undoubtedly hold.

Sincerely yours,
