INFORMATION TO ALL USERS

The quality of this reproduction is dependent upon the quality of the copy submitted.

In the unlikely event that the author did not send a complete manuscript and there are missing pages, these will be noted. Also, if material had to be removed, a note will indicate the deletion.

## ACKNOWLEDGMENTS

The writer wishes to express great appreciation to all those who aided in the work which made this thesis possible.

Special thanks go to the Magnolia Petroleum Company who sent the writer to school under their fellowship plan.

The importance of the problem was emphasized by Dr. C. G. Dahm and Dr. H. E. Stommel.

The solution of the problem and the design of the plotter was carried on in the Geophysical Department of the Colorado School of Mines. The problem was personally supervised by Professor John C. Hollister, without whose help the work would have been impossible.

The plotter was built through the aid of the Colorado School of Mines Research Foundation. They have applied for a patent on the plotter and will operate it as a service to the entire industry.

The original material for this dissertation includes a significant number of oversized pages. The full text can be viewed by accessing the supplement file.
